Tyco Deep Well Progress Update: August 2026

Program Objective

Tyco's priority is to ensure the community's water is **safe** and that residents are protected from PFAS impacts from historic operations by providing a **long term, reliable drinking water solution** for residents in the Potable Well Sampling Area

Deep Well Requests

- **148** Replacement wells requested to date; additional requests received on regular basis
- **142** Replacement wells installed
- **6** Wells queued for installation
- Bottled water and POETS service continuing until deep well completion
- Construction on an as-needed basis
- Currently partnering with **16 local contractors**
- Outreach continues and opportunity remains for all PWSA parcel owners

Results to Date

- Radium levels are reduced to approximately an order or magnitude below (**1/10)** the maximum contaminant level
- Other compounds are being filtered to **multiple orders of magnitude below criteria**
- The treated water is **safe to drink**
- Groundwater monitoring is ongoing
  - 1 year of individual **private well monitoring**
  - Results are **consistent** from quarter to quarter
  - 4 - 5 deep bedrock **monitoring wells throughout community** being monitored under WDNR oversight
